

School of Computing

SRM IST, Kattankulathur – 603 203

Course Code: 21CSC303J

Course Name: Software Engineering and Project Management

Experiment No	1
Title of Experiment	To identify the Software Project, Create Business Case, Arrive at a Problem Statement
Name of the candidate	Sakina Rizvi
Team Members	Sakina Rizvi, Rishi Vardhan, Arshiya Jaleel
Register Number	RA2211032010073, RA2211032010078, RA2211032010083
Date of Experiment	10-01-25

Mark Split Up

S.No	Description	Maximum Mark	Mark Obtained
1	Exercise	5	
2	Viva	5	
Total		10	

Staff Signature with date

Aim

To Frame a project team, analyze and identify a Software project. To create a business case and Arrive at a Problem Statement for the Career Guidance System.

Team Members:

S. No	Register No	Name	Role
1	RA2211032010078	Rishi Vardhan	Lead/Rep
2	RA2211032010073	Sakina Rizvi	Member
3	RA2211032010083	Arshiya Jaleel	Member

Project Title: Career Guidance System

Project Description

As students, we noticed that many of our peers feel lost when it comes to choosing the right career path. They often struggle with understanding what skills are in demand, what fields suit their interests, and where they can gain the right knowledge. This issue is even more prominent among students from Tier 2 and Tier 3 colleges, where access to structured career guidance is limited.

To bridge this gap, we are building a career guidance system software designed to provide personalized recommendations based on individual interests, aptitudes, and market trends. Our solution will help students explore various career options, suggest relevant skills to acquire, and offer curated learning resources, including courses, internships, and mentorship programs.

By simplifying the career decision-making process, we aim to empower students to make informed choices about their future and confidently pursue careers that match their potential.

DATE	January 10, 2025
SUBMITTED BY	Sakina Rizvi
TITLE / ROLE	Team Member

THE PROJECT

- Most of the students are facing difficulties in finding the right career path.
- There are even some more students who have some set of skills, certifications and also done some projects but don't know what role to be chosen
- So collectively we are going to solve both problems with a single software.

THE HISTORY

- Almost 80% of the students are in a confusion on which kind of skill to be learnt and which role to be chosen for his/her career
- There are very minimal websites which give support to this.

LIMITATIONS

- Need of little investment
- Lack of reach to the target audience
- Premium model might not be chosen by most of the people

APPROACH

- Automating the data from LinkedIn
- Getting the roadmaps from Roadmaps.sh
- Gathering courses from underrated Indian Institutes/Creating an own course providing platform
- Also gathering free coupons for many random courses from Udemy to provide them to customers.

BENEFITS

- The person will get an idea about his career on which role to choose
- The person will get a road map for that specific role with complete data inside
- The person will be getting a certified course for a very minimal price so that he can gain knowledge and certification at the same time.

Result

Thus, the project team formed, the project is described, the business case was prepared and the problem statement was arrived for the Career Guidance System.
