

School of Computing

SRM IST, Kattankulathur – 603 203

Course Code: 21CSC303J

Course Name: Software Engineering and Project Management

Experiment No	2
Title of Experiment	To create user stories and accept the criteria for Career Guidance System
Name of the candidate	Sakina Rizvi
Team Members	Sakina Rizvi, Rishi Vardhan, Arshiya Jaleel
Register Number	RA2211032010073, RA2211032010078, RA2211032010083
Date of Experiment	23-01-25

Mark Split Up

S.No	Description	Maximum Mark	Mark Obtained
1	Exercise	5	
2	Viva	5	
Total		10	

Staff Signature with date

Aim

To create user stories and accept the criteria for Career Guidance System.

User Story 1 - As a counsellor, I want to monitor the progress of my advisees so that I can provide tailored guidance.

- This user story targets school or college counsellors.
- The main benefit is to streamline the guidance process by providing counsellors with real-time insights into their advisees' progress, activities, and preferences. This allows for more personalized and impactful advice, improving the overall effectiveness of career counselling.

Linked Tasks

- Create a dashboard to display advisee progress.
- Enable a notes feature for counsellors to log observations.
- Allow counsellors to send customized messages or resources to advisees.

Estimation of Effort

- Normal

Acceptance Criteria

- **Given that** the counsellor logs into the system, **when** they view their dashboard, **then** they should see a summary of advisees' activities and statuses.
- **Given that** the counsellor selects an advisee, **when** they add notes, **then** the system should save those notes under the advisee's profile.

User Story 2 - As an employer, I want to find students with relevant skills and certifications so that I can hire suitable candidates for internships or jobs.

- This user story targets employers.
- The main benefit is to bridge the gap between academia and industry by providing employers with a pool of skilled candidates who are well-suited for specific roles. This helps reduce recruitment time and ensures a better match between job requirements and candidates' qualifications.

Linked Tasks

- Build a candidate search feature with filters.
- Create profiles highlighting student skills and certifications.
- Enable communication channels for employers to reach students.

Estimation of Effort

- Hard

Acceptance Criteria

- **Given that** the employer searches for candidates, **when** they apply filters, **then** the system should display matching profiles.
- **Given that** the employer selects a candidate, **when** they send a message, **then** the system should notify the candidate and log the communication.

User Story 3 - As a parent, I want to understand my child's career preferences and activities so that I can support their aspirations.

- This user story targets parents of students.
- The main benefit is to foster a collaborative environment where parents are actively engaged in their child's career planning. By understanding their child's preferences and progress, parents can offer informed support, encouragement, and resources to help their children achieve their goals.

Linked Tasks

- Develop a parent portal to view child's activities and recommendations.
- Implement privacy settings to manage data sharing between students and parents.

Estimation of Effort

- Easy

Acceptance Criteria

- **Given that** the parent accesses the portal, **when** they view their child's profile, **then** the system should display career assessments and recommendations.
- **Given that** the parent has questions, **when** they click on the help section, **then** the system should provide relevant resources or contact options.

Result

Thus, user stories were created and the criteria was accepted for the Career Guidance System.
